

HYDR COR

Because Water Matters

Effective Use of Our Products on Potatoes

The use of HydroCor (NSF Hydrogen Peroxide) for on potatoes is an important “tool” to improve the quality of the most important nutrient - **water**. Doing a water analysis prior to any application is highly recommended. All life forms (plants, animals, and humans) derive better health & vitality, improved immune systems and many other benefits with HydroCor (NSF Hydrogen Peroxide) Water in the watering system.

In British Columbia, Canada, we have treated potatoes excellent results for 4 years now. The farmer, in Northern BC, soaks the ground with our foliar application prior to planting and he also soaks the seeds in the fall before storage.

HydroCor (NSF Hydrogen Peroxide) is a unique water treatment & purification around for many years. Our “Premium Quality” Product is not only stabilized to give it better efficacy, it also has a proprietary formulation and is custom-made to fit your water needs. Our product helps disinfect and keep your plumbing clean and unplugged. With the addition of our stabilizer you will see long-lasting efficacy, and protection for your pipes against corrosion. It also helps bind and tie up contaminants, while softening your water up to 25%.

The soaking of the potatoes prior to planting is also important, as well as a low-pressure soak on the furrow with drip line. The application of our product through drip line has also shown

excellent storage results. There is occasionally a small amount of rot, but very little, and far less than without treatment. Rixos fungus has subsided substantially over the years as well.

Patience is also needed as it takes time to see documented results in any change. We believe that we can help with many of your crop issues over a period of time.

By using our application formula in your water you will see results of improvement. However, the observations listed above are from specific situations, based on their own unique results and experiences. All water is different; every environment is different; every operator is different; and of course, every soil and seed is different. We cannot guarantee you will see any specific result listed above. But what we can guarantee is that you will immediately have **clean, clear, nutritional water**, and in a very short time, better results than without our applications. When your plant and soil have healthy, nutritional water it’s a good start. Raising the oxygen levels will further contribute to your overall production success. Application rates vary from operation to operation. For well-designed application rates, contact the Distributor in your area. If there is no Distributor, please contact us directly.

Note: This is not a “magic bullet” solution. Our customized formulation, procedures, and protocol depend on many factors, and available exclusively to our customers.

If this makes sense to you, please give us a call; we would love to have you as a customer.

**CLEAN ~ CLEAR ~
NUTRITIONAL WATER
IS OUR PASSION!**

Caution: do not add fertilizers in the water at the same time as you add HydroCor (NSF Hydrogen Peroxide), without doing a Jar Test. Some fertilizers might plug emitters when mixed with oxygen. Always consult either your local Distributor or us prior to application to make sure it is done right.
